Picchio is a pneumatic tubing expander designed to enlarge the internal diameter of PVC, EVA, polyurethane, silicone and latex tubing to fit on luers, barbs or other kind of fittings.

With **Picchio** tubing is stressed by means of the movement of stainless steel jaws pneumatically driven. The tubing is inserted when the jaws are closed, then the operator opens the jaws to obtain the desired enlargement of tubing by means of a foot switch for allowing an easy component insertion. According to the tube characteristics, enlargement will last for a variable time before the tubing returns to the original shape.

Picchio can be easily installed on the operator's table and moved to the required working place. The advanced technical construction with an oil-free pneumatic system, component of the highest quality and reliability and construction specifications ensure suitability for use in clean rooms.

Picchio 2 Jaws can be supplied with either straight or 90° jaws version. The shape of 90° bent jaws allows them to maintain a parallel position during the opening operation.

TECHNICAL FEATURES

Tubing that can be processed (internal diameter):

2 Jaws from 3 to 16 (mm)

3 Jaws STRAIGHT from 3 to 20 (mm)

3 Jaws 90° from 3 to 20 mm
